

Treating Hemophilia A

IN THE

EMERGENCY Department:

CHALLENGES AND OPPORTUNITIES

How effectively are you preventing and treating bleeds in your emergency department?

Prevention and treatment of bleeds in the emergency department (ED) for individuals with hemophilia A is challenging. This CME activity will provide you with the tools you need to provide individualized, safe, and effective care for these patients.

CREDITS

PROGRAM OVERVIEW

Join us as our expert faculty reviews the latest evidence, including:

- Guideline recommendations for assessment and treatment of hemophilia A in the ED
- Identification of patients who have likely developed inhibitors to clotting factor VIII (FVIII)
- Pharmacologic agents and guideline recommendations for treatment of suspected or confirmed hemophilia A with inhibitors to FVIII
- Importance of collaborating with hematologists or hemophilia treatment centers (HTCs) to optimize treatment in the ED

TARGET AUDIENCE

- Emergency physicians engaged in the care of patients with hemophilia A

LEARNING OBJECTIVES

Upon completion of this activity, learners should be better able to:

- ✓ Recognize signs of hemophilia A bleeding episodes in the ED and initiate appropriate therapy in a timely manner
- ✓ Identify patients who have likely developed inhibitors to FVIII treatment
- ✓ Select effective and safe treatment for patients with hemophilia and those with inhibitors to FVIII who present to the ED
- ✓ Collaborate with hematologists and HTCs to optimize treatment of hemophilia A in the ED
