Illinois Prescription Monitoring Program

Welcome to the Illinois Prescription Monitoring Program (PMP). The PMP is an electronic tool that collects information on controlled substance prescriptions, schedules II, III, IV and V. This data is reported on a daily basis by retail pharmacies dispensing in Illinois. Prescribers and Dispensers of controlled substances are allowed to obtain a user ID and password to query their current or prospective patients.

The Mission of the PMP is to enhance a prescriber's and dispenser's capacity to review a patient's prescription history for therapeutic and clinical reasons and to assist in the effective treatment of patients seeking medical care. The PMP was authorized by the Illinois Controlled Substances Act ([720 ILCS 570/316](#)) and strictly adheres to [HIPAA](#) and all access, disclosure and confidentiality provisions of Illinois Law.

The website is to be used for healthcare purposes only. According to the provisions of [720 ILCS 570/318](#), Law Enforcement and regulatory agencies seeking prescription information must submit a written request to the PMP administrator. Please submit requests to: [The Prescription Monitoring Program](#).

If you would like to view or hand out our brochure, [click here](#).

NEW!

Automated Connection

PMP is excited to announce that Springfield Clinic, Memorial Physician Services, Southern Illinois University School of Medicine, and Northwestern Memorial Hospital are automating their PMP inquiries. PMP data requests are now sent TO the user's electronic health record system without logging INTO the PMP website, saving time and improving efficiency. If you would like for your organization to have this kind of functionality please contact us at (217) 524-2158.

Emergency Department Opioid Treatment and Prescribing Guidelines for Non-Oncologic or Hematologic Pain

Cook County Health and Hospitals System

The Emergency Physician is required under EMTALA to evaluate all patients for an emergency medical condition. The emergency physician should use clinical judgment when treating pain and EMTALA does not require the use of opioids.
